```java
import java.util.*;

public class sumavg {
    Run | Debug
    public static void main(String[] args) {
        int a, b, c;
        Scanner s = new Scanner(System.in);
        System.out.println(x:"Enter the input: ");
        a = s.nextInt();
        b = s.nextInt();
        c = s.nextInt();

        int sum = a + b + c;
        int avg = sum / 3;

        System.out.println("sum of all: " + sum);
        System.out.println("average of all: " + avg);

    }
}
```

```
Enter the input:
4
5
6
sum of all: 15
average of all: 5
```
